

Accelerating Vehicle Software Innovation

Sonatus provides cloud and in-vehicle software solutions that help vehicle manufacturers realize the full promise of software-defined vehicles

Proven Partner for Success

Speed up innovation cycles

- Create new experiences without new software updates
- Shorten product cycles with automated testing

Improve customer experience

- Continuously monitor and tune vehicle performance
- Resolve issues in the field with proactive diagnostics

Explore new revenue streams

- Offer new capabilities throughout the vehicle lifespan
- Enable value-added services using driver and vehicle insights

Build dynamic vehicle infrastructures with the Sonatus Vehicle Platform

Modular Building Blocks

- Network Management: Ethernet, CAN
- Data Management: Collection, Database, Storage
- Application Management: SOA, Containers
- Security: CAN & Ethernet Intrusion Detection and Prevention

Dynamically Configurable

- Dynamic data collection
- Vehicle function automation
- Multi-layered cybersecurity
- Predictable and traceable xOTA management
- Software infrastructure management
- Lightweight policy-driven updates anytime over vehicle lifecycle

Sonatus technology is in over 1 Million production vehicles

Two generations of products in mass production with

Rich ecosystem of strategic partners

Industry accolades
